# CENTRALIZED AND DECENTRALIZED

<b>CENTRALIZED</b>	<b>DECENTRALIZED</b>
Managed by a single authority or organization.	Power and control are distributed among multiple entities.
Faster decision-making due to a single decision-maker.	Slower decision-making as it often requires consensus.
Clear lines of authority make accountability easier.	Shared responsibility can make accountability complex.

# CENTRALIZED AND DECENTRALIZED CURRENCY

CENTRALIZED CURRENCY	DECENTRALIZED CURRENCY
Highly liquid and easily convertible to other currencies.	Liquidity depends on market demand and exchange availability.
Widely accepted, with user-friendly systems	Less intuitive for the average user, requiring digital wallets and keys.
Example -USD, EUR, INR, and other fiat currencies.	Example - Bitcoin, Ethereum, Solana, and other cryptocurrencies.

# BTC BLOCKCHAIN

The BTC Blockchain is a decentralized digital ledger that records Bitcoin transactions in secure, immutable blocks linked together. It operates without a central authority, with a global network of nodes verifying and validating transactions.

Miners use the **Proof of Work (PoW)** consensus mechanism to add new blocks to the chain, ensuring security and preventing fraud. The blockchain is transparent, allowing anyone to view transactions, while cryptographic techniques protect user privacy.

Bitcoin has a fixed supply of 21 million coins, preventing inflation. Beyond cryptocurrency, the blockchain has inspired innovations in areas like smart contracts and secure voting.

## ETHEREUM BLOCKCHAIN

The Ethereum blockchain is a decentralized platform that supports smart contracts and decentralized applications (dApps). Unlike Bitcoin, it uses Ether (ETH) for transactions and offers programmable functionality for complex use cases.

Ethereum operates on a **Proof of Stake (PoS)** consensus mechanism, improving energy efficiency and security. Its smart contracts are self-executing and transparent, enabling applications in decentralized finance (DeFi) and more.

The blockchain is scalable and constantly evolving, with upgrades to improve transaction speed and reduce costs, making it a leading platform for blockchain-based innovation.

## POLYGON BLOCKCHAIN

Polygon is a layer-2 scaling solution for Ethereum, designed to improve transaction speed and reduce costs using sidechains. It enhances Ethereum's scalability for decentralized applications (dApps), DeFi, and NFTs while maintaining security and decentralization.

Polygon uses a Proof of Stake (PoS) consensus mechanism and ensures interoperability with Ethereum. It offers faster, cheaper transactions, making it a popular choice for developers looking to scale their projects.

# POL PROFILE

Token Type	ERC-20 Token
Total Supply	10 billion
Circulating Supply	Approximately 8.2 billion
Initial Supply	3.8 billion tokens (at launch)
Market Cap	4.10 Billion

# POL PROFILE

**Burn Mechanism:** Polygon periodically burns a portion of the transaction fees to reduce the circulating supply, making MATIC a deflationary token over time.

**Scalability:** Polygon's sidechains help Ethereum scale by offloading transactions, providing faster, cheaper, and more efficient transactions for decentralized applications (dApps), decentralized finance (DeFi), and NFTs. With the ability to process many transactions per second (TPS), it significantly reduces Ethereum's congestion and high fees.

**Governance:** Holders can actively participate in the decision-making process of the Polygon network, which includes voting on governance proposals such as network upgrades, fee adjustments, and protocol improvements.

# MARKET TREND

**Product Based Concept** – Time consumption, fixed income is not guaranteed.

**Investment (ROI)** – There is always a risk of the business shutting down at any time.

**Single Leg** – The most uncalculated plan.

**Level Plan** – Income decreases as the team levels grow.

**Binary** – Power leg is a burden for each leader.

**Token/Coin** – MLM tokens are often manipulated by market makers who dump thousands of coins, affecting the coin's rate.

**Other Trends** – There are many other trends in the market where you have to take risks and face losses.

# K10 PROGRAM INCOME

The company's Organic CTO's 30% share is distributed among users.

## K10 Program Unique Key Features:

- The sooner you join, the bigger your team will grow.
- The more direct referrals you have, the bigger your team will be.
- The more active your direct referrals are, the more points you will earn.
- The more points you earn, the more income you will receive.
- **K10 Capping** – You can earn a maximum of 105% of your investment package every time.
- The closing happens per day.

## Formula for calculating points:

$$\frac{\text{Total 30\% CTO} + 25\% \text{ RT} + 25\% \text{ SP}}{\text{Total Paid ID}} = 1 \text{ Point}$$

# Eligibility for Earning in the K10 Program

In the K10 Program, you can earn up to 105% of your investment package monthly, which comes to 3.50% per day. This earning is based on the performance of your downline in the K10 team.

2X B (K10) time : 10 days

YOU	\$4
DIRECT	\$8

4X B (K10) time : 90 days

YOU	\$4
DIRECT	\$16

After 90 days, you will not be able to top-up your ID. The amount you invested will start earning income in the K10 Program only after 90 days from the date of investment. This income will stop once it reaches 10x. After that, the ID will be counted as a permanently non-working ID.

# Earning Possibilities in the K10 Program

Months	Approx K10 Team
1	2
2	4
3	8
4	16
5	32
6	64
7	128
8	256
9	512
10	1024
11	2048
12	4096
<b>Total</b>	<b>8190</b>

In the k10 Program, if the point value is \$0.1, you can estimate your earnings after one year based on the size of your downline.

$$8190 \text{ points} \times \$0.1 = \$819$$

# MAGIC INCOME

The company's Organic CTO's 70% share is distributed among users.  
The closing happens once in every 5 days.
